Network & Systems Administrator

Nairobi, Kenya | Available for On-site & Remote Roles

PROFESSIONAL SUMMARY

Results-driven Network & Systems Administrator with hands-on experience in enterprise infrastructure, cybersecurity operations, and client-facing technical support. Skilled in administering Windows Server and Linux environments, managing SAN/NAS storage solutions, and deploying SIEM platforms for security monitoring. CCNA background with additional training in Palo Alto and Fortinet technologies. Able to troubleshoot complex network issues, implementing virtualized environments, and translating technical findings into actionable client reports.

CORE SKILLS

Windows Server	Linux Admin	Network Admin	Virtualization
SAN/NAS Storage	Backup & Recovery	Firewall Admin	Logsign SIEM
VMware	NetApp	Checkpoint	Pentesting

PROFESSIONAL EXPERIENCE

Customer Engineer

April 2024 – July 2026

Four Leaves Kenya | Ngong Road, Nairobi

- Administer and maintain Windows Server and Linux-based systems, ensuring high availability, performance, and security across the enterprise environment.
- Design and implement SAN (Storage Area Network) solutions using NetApp appliances, including configuration, performance tuning, and capacity planning.
- Deploy, configure, and manage Logsign SIEM platform for centralized log collection, real-time threat monitoring, and security incident detection.
- Perform network administration tasks including firewall rule management (Checkpoint), VLAN configuration, switch/router setup, and network troubleshooting.
- Conduct penetration testing engagements for clients to identify vulnerabilities in systems and networks, producing detailed remediation reports.
- Manage virtualized infrastructure using VMware, including VM provisioning, snapshot management, and resource optimization.
- Implement and maintain backup and disaster recovery solutions, conducting routine testing to validate recovery time and recovery point objectives.
- Deliver end-user and technical training on installed systems and security tools, increasing client adoption and reducing support escalations.
- Provide first and second-line technical support to clients, resolving hardware, software, and network issues within agreed SLAs.
- Conduct preventive maintenance on servers, storage systems, and network equipment to minimize downtime and extend hardware lifespan.

CERTIFICATIONS

- CyberTalents Blue Team Certification
- Logsign Certified Administrator

PROFESSIONAL TRAINING

- Logsign Unified SecOps Platform – Advanced
- Logsign Unified SecOps Platform – Fundamentals
- Palo Alto Networks – NGFW Administration
- Fortinet – FortiGate Network Security
- Cisco CCNA – Routing, Switching & Networking

EDUCATION

Bachelor of Business Information Technology

KCA University, Ruaraka – Nairobi

Graduated
